

## CLMOOC "Mission Inedible"

I've had some wonderful, beautiful, hand-crafted cards/items sent to me by many of you who participated in the 2016 round of CLMOOC. I have enjoyed looking at them and thinking about the connections they represent.

Some good fortune arrived in December. I won a contest, providing me with a 3D printer. While my hand-crafting skills are not much, I do work with computers a lot. The 3D printer provides me a way to convert computer skills to something physical to share.

It seemed, too, that you might enjoy a token of your CLMOOC participation.

These key fobs are on their way to those with whom I interacted most, and will be soon on their way to the others whose addresses I have from the postcard project list.

If I missed anybody who might want one of these, let me know.

**Your mission, Mr. Phelps, should you choose to accept it:**

- Paint this key fob in your own pattern of colors. Acrylic paint is best. (If you wish, use sandpaper or an emery board to smooth the surfaces first.)
- Do it with a fresher batch of paint and a steadier hand than mine.
- Share a photo of your fob with **#clmooc** connections.
- Display it proudly in your house/classroom.
- OR--
- Add it to your keyring and carry it everywhere.
- OR--
- Just throw it in the junk drawer as-is.
